Evaluation of Visual Disability in a Virtual Reality Environment

Clinical assessment of vision-related disability experienced by visually-impaired patients is obfuscated by the lack of instruments that can inform real-world visual performance. ACE VR Ltd. has constructed virtual reality (VR) environments in a VR headset simulating day-to-day activities to visualise and quantify visual disability. These include (1) supermarket shopping, (2) stair navigation in daytime, (3) stair navigation in nighttime, (4) city navigation in daytime, and (5) city navigation in nighttime. Its data supports VR simulations can empower clinicians to better understand a patient's perspective of what and how daily activities impart disability and connect clinical test results of vision to performance measures that are relevant to patients. The innovation of VR simulations of activities that are relevant to patients' real-world experience provides a new paradigm to measure visual disability for enhancement of clinical care, facilitating clinicians to devise appropriate treatment, support and visual aids to improve patients' quality of vision and quality of life.

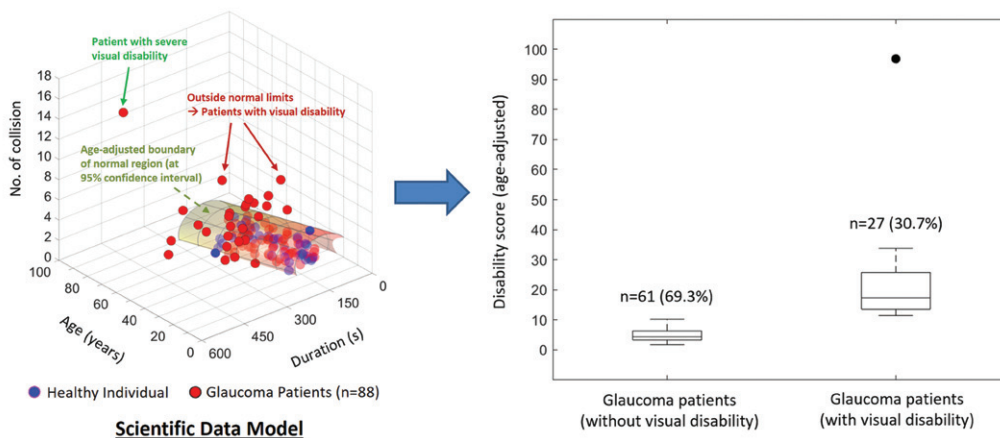

以虛擬實境評估視力障礙

艾斯數碼有限公司指出，目前尚未有任何臨床的技術，可以切實地就與病人日常生活有直接關聯的視能力進行評估。艾斯數碼有限公司產品透過虛擬實境頭戴式裝置，建立虛擬現實平台來模擬病人的日常活動，以測量和可視化病人的視力障礙程度，其中包括超市購物，模擬白天及夜間上落樓梯，以及模擬白天及夜間城市街道上行走。它們的數據支持虛擬實境模擬檢測可有效測量和監測因眼疾所造成的視力障礙，為病人的及早治療及預後提供更多元化的臨床依據避免惡化，幫助醫生制定視力復康方案，並配合更適當的治療和援助工具來改善眼疾患者的視力和生活質素。

VR Disability Score (to identify patients with visual disability)

Comments from Judging Panel 評審委員會評語

This is an innovative and well-designed application leveraging virtual reality (VR) technology in the evaluation of visual disability. It gives great flexibility in the testing administration with this non-invasive VR simulations when compare to the traditional way of clinical testing for eye diseases. It improves the efficiency for eye testing thus facilitates the clinicians to adopt appropriate treatments. It can also generate a quantitative standard for visual impairment based on the data obtained from users.

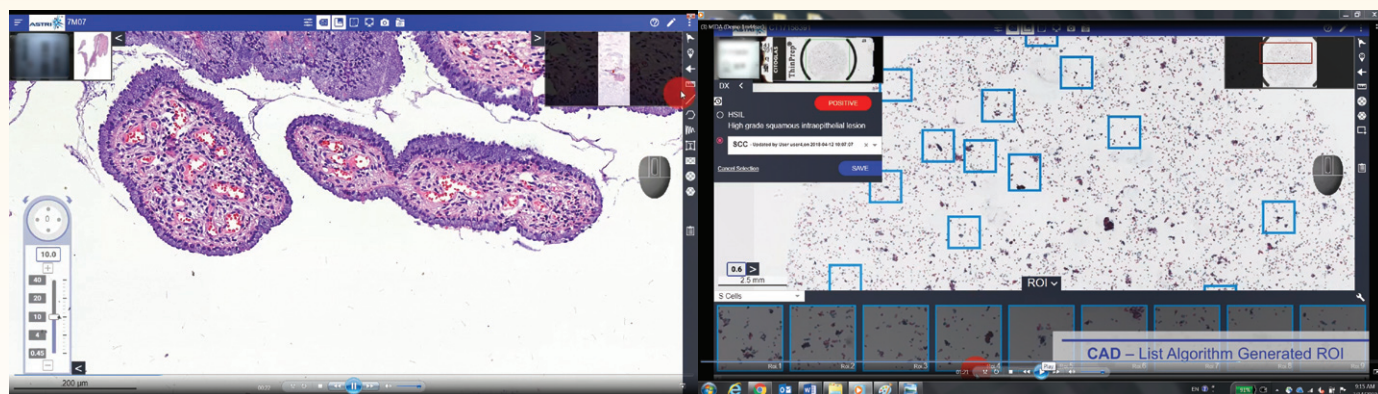

It is impressive that the applicant has successfully applied multimedia elements and gamification concepts in clinical practices. It is expected to gain a greater level of acceptance and adoption in eye care industry in future, benefiting the society as a whole.

這個應用程式利用虛擬實境 (VR) 技術來評估視力缺損。概念創新而設計卓越，與傳統的眼部疾病臨床試驗相比，這種非侵入性 VR 模擬在測量方面具有很大的靈活性，能提高測試的效率，從而幫助臨床醫生採取適當的治療方法。更可以把用戶收集到的測試結果數據化，建立成為視覺障礙的測量標準，用來量化視力殘疾的程度。

這方案成功地將多媒體元素和遊戲概念應用於臨床醫學試驗中，令人印象深刻，表現出類拔萃。預計未來在眼科護理界別中獲得更高的接受度和採用率，整個社會亦從中受益。

Farm66 has developed an IoT solution “Cloud-based Farming Parameters Monitoring System” dedicated for indoor farms. Its solution consists of both water and environmental sensors for collecting data related to the ambient environment and water quality. It also comprises actuators for adjusting light schedules and water quality parameters. With the data and the controllers, it could ensure the plants are grown under a controlled environment.

Moreover, by conducting correlation analysis and selecting appropriate features for machine learning, it could figure out the best growing environment for each plant. Hence, by correctly and timely adjust the parameters for the environment and water throughout the plant growth, it could maximise the crop yield and optimise the crop quality.

Comments from Judging Panel 評審委員會評語

Indoor aquaponics farming eco-system is a self-contained, sustainable and contamination-free solution of urban agricultural development. While the monitoring system is practical and well designed in terms of the software and hardware. Integrated with energy-efficient spectrum LED wavelength farming technology, Industrial Internet of Things (IIoT), cloud computing and more, it can maximise the crop yield and optimise the crop quality, developing an economical and efficient plan for local-farming.

This farming solution has good capacity to develop to a scalable business and will be the future technology trend. It is recommended to put more promotion efforts to attract more users.

雲端農業參數監測系統

Farm66 研發了一個專為室內種植工廠而設的物聯網解決方案「雲端農業參數監測系統」，利用傳感器在種植系統附近收集與環境及水質相關的數據。同時它亦設置控制器調節光照時間及水質營養參數，以確保植物生長在全環控的環境。

另外，透過進行數據分析及機器學習，系統能找出每種植物的最佳生長環境。於是在各種植物的生長過程中，能準確地於不同時段營造對應最理想的環境，從而優化整體蔬菜的產量及質量。

室內水耕農業生態系統是一個獨立、可持續和無污染的城市農業發展解決方案，配合這個監控系統則令室內水耕更完善。系統的軟件和硬件設計精心完善且非常實用，結合多項科技如：節能LED光波種植技術、工業物聯網(IIoT)、雲端計算等，能使農作物的產量大大提高，其品質亦得以提升，為本地提供一個高經濟效益和高效能的農業計劃。

這個方案有很大的市場發展空間，業務規模擴展可望更上一層樓，成為未來的技術趨勢。建議加大推廣力度，吸引更多用戶。
